already studied techniques.

Experience

Wiley
Software Engineer
November 2021 - Present (1 year 1 month)
Moscow, Russia

My responsibilities:

- Developing new interfaces in React stack (Classes / Hooks), Redux-Saga,
Node.js, SASS, Webpack, Git.
- Writing unit tests (Jest, Enzyme).
- Writing and supporting of UI documentation (Storybook).
- Team work with frontend and backend developers, testers and analysts on
the Scrum methodology.
- Conducting code reviews.
- Support, optimization and improvement of the company's existing solutions.

RENDEZ-VOUS

2 years 5 months

Leading specialist in web development and web design
September 2020 - October 2021 (1 year 2 months)
Moscow, Russia

My responsibilities:

- Designing and developing clean and adaptive interfaces with minimal responsiveness.
- Code refactoring, bug finding and elimination, internal project documentation maintenance.
- Client-side design of the company's internal training portal.
- Developing client part of the company's internal training portal using BEM methodology.
- Development of new projects in the stack of HTML5, CSS, Sass, Bootstrap, JavaScript, jQuery, xQuery, SQL.
- Implementing React into new and existing projects.
- Interaction with internal and external development teams.
- Supporting, optimizing and improving the company's existing solutions.

My achievements:

- Creating a design system from scratch.
- Complete revision of the company's internal educational website with the application of the created design system.
- Introduction of new technologies into the design of the training site of the company: Bootstrap, jQuery with subsequent implementation of React.
- Creation of a web application "Individual manager's tablet". The application allows managers to plan upcoming lessons in real time, add notes, and see the progress and effectiveness of their subordinates.
- Creating the Learning Calendar web application. This application allows real-time tracking of employee enrollment for training, which avoids overcrowding of training groups.

Frontend Developer
June 2019 - September 2020 (1 year 4 months)
Moscow, Russia

My responsibilities:

- Design of the client part of the internal training portal of the company.

- Development of the client part of the internal training portal of the company using BEM methodology.
- Development of new projects in HTML5, CSS, Sass, Bootstrap, JavaScript, jQuery, xQuery, SQL stack.
- Supporting, optimizing and improving the company's existing solutions.

My achievements:

- Implementing and automating new ways of controlling and reporting. All reporting is automated and does not require administrator involvement.
- Complete revision of training materials from print formats to web format.
- Introduction of new technologies into the company's educational website project: Bootstrap, jQuery.
